Too funny—I never sent this message, and now it's totally outdated... ☺

Our AWFUL page definitely will need to look like this page:

<http://www2.epa.gov/region8/bridger-pipeline-release>

HQ wants <http://www2.epa.gov/region8/gold-king-mine-release-emergency-response> to be the

MAIN place where the public goes for information—ick!!

I waited and waited and WAITED for information from Lisa and Paula this weekend, but I only got a couple of short messages that I'd need a special decoder ring to be able to use on the Web page. ☺

I know that it's all headless chickens right now, and the building was FULL of responders all weekend long. But I wish that the WEB page would get some attention, especially if HQ wants it to be the MAIN source of information for the public. Right hand meet left hand. ☺

If you need a different size, one of the GIS folks could open it for you.

No, but as they say below 24mm2015_08_09_15_36_30.gecorr is a jpeg of the same image.

Image 24mm2015_08_09_15_36_30.kmz is a google earth image showing attenuation of the plume;

24mm2015_08_09_15_36_30.gecorr is a jpeg of the same image. IMG 0264 is a 1000 Ft AGL oblique shot north of Durango.
